#### SPECIFIC INSTRUCTIONS:

To avoid conflict with other variety names in use, the applicant must check the appropriate recognized authority and provide evidence that the permanent name of the application variety (even if it is a parental, inbred line) has been cleared by the appropriate recognized authority before the Certificate of Protection is issued. For example, for agricultural and vegetable crops, contact: U.S. Department of Agriculture, Agricultural Marketing Service, Livestock and Seed Programs, Seed Regulatory and Testing Branch, 801 Summit Crossing Place, Suite C, Gastonia, North Carolina 28054-2193 Telephone: (704) 810-8870. <http://www.ams.usda.gov/lsg/seed.htm>.

#### ITEM

- 19a. Give:
- (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method;
  - (2) the details of subsequent stages of selection and multiplication;
  - (3) evidence of uniformity and stability; and
  - (4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified
- 19b. Give a summary of the variety's distinctness. Clearly state how this application variety may be distinguished from all other varieties in the same crop. If the new variety is most similar to one variety or a group of related varieties:
- (1) identify these varieties and state all differences objectively;
  - (2) attach replicated statistical data for characters expressed numerically and demonstrate that these are clear differences; and
  - (3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.
- 19c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.
- 19d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.
- 19e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.
20. If "Yes" is specified (*seed of this variety be sold by variety name only, as a class of certified seed*), the applicant **MAY NOT** reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See Regulations and Rules of Practice, Section 97.103).
23. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.
24. See Section 55 of the Act for instructions on claiming the benefit of an earlier filing date.

## Origin and Breeding History of the Variety

**1994** (United States) Original pedigree: NU 9401 (mother) and 40-3-2 (father). Code of F1 hybrid seed is ZU9401, a code that will be used for the line until it is increased as pure seed.

**Pedigree:** Nidera A 4209RG is an F4 plant selection from the cross NU 9401 (mother) and 40-3-2 (father).

NU 9401 (mother) is an experimental line which was selected from the cross [(A 3322 x A 3935) x 40-3-2].

A 3322 and A 3935 are Asgrow commercial lines.

40-3-2 is a ROUNDUP READY soybean event produced by introduction of the glyphosate tolerant *Cp4 epsps* coding sequence derived from the common soil bacterium *Agrobacterium sp.* Strain CP4 was introduced into an Asgrow soybean commercial line A 5403 using particle-acceleration transformation.

**Population:** The improvement method Single Seed Decent (SSD) was conducted in Puerto Rico from F1 to F4

100 F4 derived individual plants harvested in Puerto Rico in 1996, were sent to USA.

**Selection Criteria:** Selection criteria used during breeding was superior yield compared with high-yielding varieties of similar maturity and resistance to *Phytophthora* root rot race 1.

**Evidence of uniformity and stability:** Nidera A 4209RG was found to be uniform and stable for more than two generations. No variants were observed

**1997 USA**

Progeny Rows: 100 rows were planted in USA. The row named ZU9401 Z97 was selected as an experimental line, starting yield trials evaluation.

Yield tests: 9G0924-29 (1998-1999) 00INC.USA-84 (1999-2000), 01S432-51 (2001), 02V440-32 (2002), 03V430-26(2003), 04V410-19 (2004).

**2001-2002:** Breeder seed in Venado Tuerto, Santa Fe, Argentina. From 60 individual plants harvested in Venado Tuerto Santa Fe, Argentina (April 2001). The breeder seed is planted, tests and treatments are performed to maintain variety purity.

The variety purity relative to the gene ROUNDUP READY is realized by fumigating the plants with 3.2 liters of commercial ROUNDUP herbicide in stage V3 in a divided application, two passes of 1.6 liters each. Subsequent laboratory tests are used to identify other characteristics, and the same procedure is continued. The homogeneous rows with the same characteristics may be harvested in bulk. This results in Basic seed I.

**2002-2003:** Basic Seed I in Venado Tuerto, Santa Fe, Argentina.

Basic Seed I is planted, and all the tests and treatments are performed to maintain variety purity. This results in Basic Seed II.

**2003-2004:** Foundation Seed in USA.

Basic Seed II was planted, and all the tests and treatments are performed to maintain variety purity. This results in Foundation Seed.

## EXHIBIT B

## Statement of Distinctness

Nidera A 4209RG is most similar to variety A 4201RG. Nidera A 4209RG can be distinguished from A 4201RG in regard to the following traits:

Nidera A 4209RG is resistant to Phytophthora race 1 and susceptible to race 3, while A 4201RG is resistant to both Phytophthora race 1 and race 3.

For Phytophthora race 1 tests were performed in a greenhouse in Argentina for the years 2001-2002 and 2003-2004. On a scale from 0-100 (with 0 being "resistant" and 100 being "susceptible"), both Nidera A 4209RG and A 4201RG tested "resistant" to race 1 with scores of 0.

For Phytophthora races 1 and 3, tests were performed in a greenhouse in Illinois between June and July of 2003. A scale of 0%-100% was used where the percent indicates the percentage of plants alive. Nidera A 4209RG had a score of 100% for race 1 and a score of 0% for race 3, while A 4201RG had a score of 100% for race 1 and a score of 100% for race 3.

Nidera A 4209RG is susceptible to Root Knot Nematode (*Meloidogyne incognita* var. *incognita* and *Meloidogyne incognita* var. *Javanica*), while A 4201RG is resistant to Root Knot Nematode (*Meloidogyne incognita* var. *incognita* and *Meloidogyne incognita* var. *Javanica*).

Field tests were performed in a naturally infected field in Rio Cuarto, Cordoba for the years 2004-2005, 2005-2006 and 2006-2007. 3 repetitions with randomization were performed. On a scale from 1-9 where 1 is "resistant" and 9 is "highly susceptible", Nidera A 4209RG was found to have a score of 9, while A 4201RG was found to have a score of 1.

Nidera A 4209RG has a light seed coat shade, while A 4201RG has an intermediate seed coat shade.

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0581-0055. ## F. TRANSGENIC COMPOSITION:

Has the development of the subject variety included the insertion of genetic material from an organism other than a soybean, or, the removal of genetic material from the application variety?

If yes, please complete the following information requests\*. Use additional pages if necessary. ☒ Yes ☐ No

1. Please state the vector's name:
2. Please state the vector components:
3. Please describe the genetic material successfully transferred into the subject variety:
4. Please describe the insertion protocol:

\* A literature citation(s) explaining the four information requests above may be an acceptable alternative to completion of the "Transgenic Composition" portion of this form. **This variety is a Roundup Ready™ variety derived from the Monsanto transformant 40-3-2 which contains the gene CP4. Please see Crop Science 35: 1451-1461 (1995)**

## G. BIOCHEMICAL MARKERS:

Please describe any additional genetic and/or biochemical information which you believe will be helpful in further describing the subject variety here (e.g., Single Nucleotide Polymorphisms (SNPs), Simple Sequence Repeats (SSRs), Restriction Fragment Length Polymorphisms (RFLPs), Isozyme characterization, etc.). Use additional pages if necessary.

## H. STATISTICAL DATA FOR APPLICATION AND CITED MOST SIMILAR VARIETIES:

Please provide paired comparison data and appropriate statistical test (e.g. LSD, Std. error, ANOVA, Mann-Whitney U-test or Kruskal-Wallis Test, etc.) value (95 or > probability level).
